

WHAT IS CLAIMED IS:

1. A steering column cover for a vehicle having an upper column cover and a lower column cover comprising:

5 a bolt inserting part formed in the upper column cover; and
an impact absorption boss part protruding from the lower column cover, wherein said bolt inserting part and the impact absorption boss part is securely coupled by means of a bolt.

10 2. The steering column cover according to claim 1, wherein said boss part comprises:

a bolt hole at a center of an upper surface of the boss part;
notches formed on a circumference of the boss part at regular intervals; and
support parts defined by said notches.

15

3. The steering column cover according to claim 2, wherein the boss part further comprises a recess formed on the upper surface of the boss part so that the bolt inserting part of the upper column cover can be firmly engaged thereto.

20 4. The steering column cover according to claim 3, wherein a width of the notches can be adjusted in accordance with required impact strength.

5. The steering column cover according to claim 1, wherein the boss part further comprises a recess formed on the upper surface of the boss part so that the bolt inserting
25 part of the upper column cover can be firmly engaged thereto.

6. The steering column cover according to claim 1, wherein a width of the notches can be adjusted in accordance with required impact strength.
